

ABSTRACT

An STB to which a printer is connected includes: a transceiver for receiving from outside a display content and thumbnail data for checkup of a print image or a print content
5 where the link destination of the thumbnail data is indicated;
a display data generator for generating display data used to display a display content on a TV; a remote control for inputting a print image and a print instruction; a content analyzer for analyzing a print content; and a print data output section for
10 outputting the print content on a printer based on an instruction from the remote control.
